Education

Chosun University

B.S. IN ARTIFICIAL INTELLIGENCE ENGINEERING

- Total GPA: 3.85/4.5, Major GPA: 3.73/4.5

Gwangju, S.Korea

Mar. 2021 - Feb. 2027

Internships

Sensor Fusion Based Artificial Intelligence LAB

UNDERGRADUATE RESEARCHER

- Research on deep learning-based ECG reconstruction and representation learning
- Participated in research paper seminars.

Gwangju, S.Korea

Sep. 2024 - Present

Awards & Honors

AWARDS

- 2026.08 **3rd Place, Best Use of Machine Learning**, ML Empowerment Build Challenge 2.0
- 2026.07 **3rd Award**, Qualcomm Institute AI Entrepreneurship Program Summer 2026
- 2026.07 **2nd Award**, Jeonbuk Public Data & AI Utilization Startup Competition
- 2025–2026 **1st Award (2025) & 4th Award (2026)**, Honam IS Coding Challenge
- 2025.11 **4th Award**, KEPCO KDN Energy Valley Software Competition
- 2025.06 **1st Place**, Construction Gravel Classification AI Competition

Global

UC San Diego, USA

Jeonbuk, S.Korea

Jeonju, S.Korea

Naju, S.Korea

Dacon

HONORS

- 2025 **Pride CSU Seoseok Scholarship**, Awarded to students with high achievements throughout the year
- 2023–2026 **Baekak Academic Merit Scholarship**, Academic Excellence Scholarship, awarded multiple times

Chosun University

Chosun University

Extracurricular Activity

Qualcomm Institute, University of California San Diego

AI ENTREPRENEURSHIP PROGRAM PARTICIPANT

- Participated in the 17th Qualcomm Institute AI Entrepreneurship Program, focusing on AI-driven decision-making and machine learning.
- Developed Paragon, a 3D point cloud-based aerodynamic prediction platform, and received 3rd Place in the program's final project evaluation.

La Jolla, CA, USA

Jun. 2026 - Jul. 2026

University of Guam

EXCHANGE STUDENT

- Built confidence in English communication through daily interactions with international students while experiencing Guam's local culture and diverse perspectives.

Guam, USA

Jan. 2026

Honam ICT

GLOBAL IT TRAINING FELLOW

- Selected for a fully funded global IT training program after receiving the Grand Prize at the Honam IS Coding Challenge.
- Visited technology companies including Alibaba, Baidu, and DeepBlue Technology to explore AI commercialization and industry applications.

Shanghai & Hangzhou, China

Nov. 2025

Project Experience

Paragon: 3D Point Cloud-based Aerodynamic Prediction Platform

AI ENGINEER

- Developed 3D point-cloud regression models including PointNet and DGCNN variants to predict vehicle aerodynamic drag coefficients.
- Benchmarked deep learning and parametric ML models under a matched 5-fold protocol using R^2 , MAE, and ranking accuracy to evaluate generalization.
- Built an end-to-end inference pipeline with PyTorch, ONNX Runtime, FastAPI, and React for real-time aerodynamic screening.

UC San Diego, USA

Jun. 2026 - Jul. 2026

BeaverTalk: AI-based Korean Pronunciation Diagnosis Platform

Jeonbuk, S.Korea

AI ENGINEER

2026 - Present

- Developed an AI-based Korean pronunciation learning platform providing native-language-specific pronunciation diagnosis and personalized feedback for foreign learners.
- Analyzed large-scale foreign learner speech data to identify nationality-specific pronunciation error patterns and support pronunciation diagnosis.
- Contributed to an end-to-end service from AI model development to MVP implementation, institutional beta testing, and real-world deployment.
- Selected among the Top 100 in AI Rookie and advanced to the final evaluation round for Top 40 selection.

3DGS-based Flood-prone Area Visualization Platform

Gwangju, S.Korea

TEAM LEADER, PRESENTER

Sep. 2025 - Nov. 2025

- Led development of real-time 3D disaster response platform using 3D Gaussian Splatting, processing 10,000+ data points and winning 1st Place at national competition and the KEPCO KDN Award.
- Designed a robust data pipeline integrating AWS S3 and a Flask server for the real-time aggregation of rainfall data and citizen reports.
- Implemented an automated de-identification system using FFmpeg to mask sensitive information (faces, license plates), ensuring data privacy while maintaining 3D rendering quality.

Construction Aggregate Rock Classification [1st Place]

NIA / DACON

TEAM LEADER & MODEL DEVELOPER

Apr. 2026 - May. 2026

- Developed a CNN-ViT ensemble for 7-class construction aggregate classification and achieved 1st Place in the final leaderboard.
- Addressed severe class imbalance and train-test domain gaps using WeightedRandomSampler and targeted data augmentation.
- Achieved a Macro F1-Score of 0.932 through soft-voting ensemble and TTA across 200+ experimental iterations.

LLM-based SW Education Platform

Gwangju, S.Korea & Vientiane, Laos

FRONT-END DEVELOPER & POSTER PRESENTER

Sep. 2024 - Dec. 2024

- Developed an interactive SW education platform using SvelteKit, TypeScript, and WebAssembly for secure in-browser code execution.
- Designed a PostgreSQL/Prisma data layer for managing LLM-generated educational content and user learning data.
- Presented the platform at the SMA 2024 International Conference in Vientiane, Laos.

Skills

Programming	Python, TypeScript, JavaScript
AI & Machine Learning	PyTorch, Transformers, scikit-learn, 3D Point Cloud, Computer Vision
Deployment & Backend	FastAPI, ONNX Runtime, Docker, Linux
Cloud & Tools	Git, AWS, Google Cloud
Web	React, SvelteKit

Others

English Proficiency

2024.11 TOEIC SPEAKING - Intermediate High (140), ETS

Certifications

- 2026.08 Google Cloud Certified Professional Machine Learning Engineer, Google
- 2025.11 TOPCIT Level 3 (428), IITP
- 2024.06 ADsP, KData
